

Dear Commissioner(s), The BPL issue is a true "pandora's box". If allowed to be opened, problems toward government communications such as FEMA and amateur communications (which are often used to aid the health and welfare of the average citizen in times of natural disasters) have yet to be observed. BENEFIT vs RISK is "zilch". If this monster is allowed to be released into our environment, it will never totally be able to be recalled and we already know that it's an engineering disaster. Certainly the "dangled carrot" of the various beneficial industries will eventually taste very bitter to the FCC if BPL is allowed to live. Many intelligent countries have already labelled it a TRUE LOSER. Sincerely, Kevin W. Cox--  
Registered Pharmacist.
